

Bekzat Uraimov

Bachelor of Science in Computer Science, Bellevue College · Backend with Python · Building systems in C++
Seattle, WA · bkzturaimov@gmail.com · [bekzat.dev](#) · [github.com/bekzat-uraimov](#) · [linkedin.com/in/bekzat-uraimov](#)

EDUCATION

Bellevue College, Bachelor of Science in Computer Science <i>Current courses: Data Structures (C++), Python for Data Science</i>	Expected Apr 2028
Cascadia College, Associate Degree, Direct Transfer (DTA) · GPA 3.6	Completed Aug 2026

EXPERIENCE

ONER , Software Engineer <i>Online filmmaking course platform for Central Asia, preparing for launch · Python, FastAPI, PostgreSQL, Docker · code</i>	May 2026 – Present · Remote
- Built the backend for a paid course platform for Kyrgyzstan, Kazakhstan and Uzbekistan, from the database design to payments and video. - Kept paid lessons locked by checking access on the server against one table of who owns what, so the browser can never unlock a course by itself. - Stopped double charges and free access by checking every payment webhook 3 ways (signature, amount, duplicate) before a course opens, and returning the same order when someone clicks "buy" twice. - Made paid videos hard to share by playing them through Kinescope DRM, with short-lived tokens only owners get. - Let the team run the platform without touching the database by building an admin API (about 25 routes) for courses, file uploads, users, purchases and refunds. - Caught bugs before they shipped by writing pytest tests first and running them on every push in GitHub Actions.	
Akyldoo AI , Software Engineer (part-time) <i>Student startup building ThinkCoder, an AI coding assistant · Python, LiteLLM, Ollama</i>	Mar 2026 – Present · Seattle, WA
- Cut estimated AI API spend by about 40% before launch by sending easy requests to a free local model (Qwen2.5-Coder 7B on Ollama) and only hard ones to a paid cloud model, using LiteLLM. - Kept long coding sessions from breaking at the model's limit by managing how much context and how many tokens each request carries.	
Video Editor & Colorist <i>Metr Production Studio (2 yrs), Antares (1 yr), Mostcreative Agency (1 yr)</i>	Mar 2019 – Feb 2023 · Kyrgyzstan
Delivered commercial videos for business clients for four years, from shoot to final color grade, and worked directly with clients on feedback, revisions and deadlines.	

HACKATHONS & PROJECTS

Poly Predictor Kit · Polymarket Track Winner , QuackHacks, University of Oregon	Nov 2025
Led a team of 6 to build a Chrome extension that turns messy Polymarket comments into a clear read on each event, using Gemini and a risk check.	
AI Visual Novel Creator · Best Use of AI , CodeDay Fall 2025, Seattle	Nov 2025
Led a team of 6 to build a Ren'Py game loop that turns one prompt into a playable visual novel, with Gemini writing the story and Stability AI drawing the scenes.	
focusn't · focus timer (TypeScript, FastAPI)	2026
Built an in-browser distraction detector that uses computer vision to notice when you look away or pick up your phone. Video never leaves the device. Team project.	

SKILLS

Languages	Python, C++, Java, TypeScript, SQL
Backend	FastAPI, Flask, PostgreSQL, REST APIs, JWT auth, pytest
AI	LiteLLM, Ollama
Tools	Docker, Git, GitHub Actions, Cloudflare R2
