bkzturaimov@gmail.com • Seattle, WA • bekzat.dev • github.com/bekzat-uraimov • linkedin.com/in/bekzat-uraimov

Education

Bellevue College — Bellevue, WA
Bachelor of Science in Computer Science — *Sep. '26 – Jun. '28*
Relevant Coursework: Python for Data Science, Data Structures (C++)

Cascadia College
Associate Degree, Direct Transfer (DTA), GPA: 3.51 — *Mar. '25 – Aug. '26*

Work Experience

ONER • Remote — May '26 – Present
Backend Engineer
Backend for a film course platform for Central Asia, in closed testing with 10 users (FastAPI, PostgreSQL, Docker).
- Prevented double charges by checking every payment webhook 3 ways (signature, amount, duplicate) and reusing the order when a student clicks "buy" twice.
- Protected paid lessons by checking JWT login and course ownership on the server for every lesson request.
- Made course videos hard to download or share by streaming them through Kinescope DRM with short-lived tokens that only course owners get.
- Let admins run the platform without touching the database by building an API for courses, users and refunds.

akyldoo.ai • ThinkCoder — Mar '26 – May '26
AI Engineer Intern
- Cut estimated model spend about 40% by building the model routing layer for ThinkCoder, an AI coding assistant, so easy questions go to a free local model and hard ones go to a paid cloud model (Python, LiteLLM, Ollama).

Antares and Mostcreative Agency • Kyrgyzstan — Mar '21 – Feb '23
Video Editor and Colorist
- Delivered commercial and promo videos for clients on deadline, handling everything from the shoot to the final color grade in DaVinci Resolve.
- Worked directly with clients through feedback and revision rounds until final delivery.

Projects

llm-failover — Oct '26 – Present
Fault tolerant inference service (C++, Python, TCP, llama2.c)
- Kept LLM answers going through server crashes by logging every token at the router, so another worker finishes the same answer byte for byte.
- Cut saved state about 3,000x (1 KB vs 3.5 MB KV cache) by storing only tokens and random state and rebuilding the rest by replay.

Heart Disease Classification • Python, scikit-learn, XGBoost — Oct '26
- Found that XGBoost overfit (100% train vs 85% test accuracy) on 297 patients by comparing it with an L2-regularized logistic regression, which held up better on unseen data.

Hackathons

Poly Predictor Kit • Polymarket Track Winner, QuackHacks (Univ. of Oregon) — Nov '25
Led a team of 6 on an AI Chrome extension that explains Polymarket events. I built the comment collector.

AI Visual Novel Creator • Best Use of AI, CodeDay Fall 2025, Seattle — Nov '25
Built the Ren'Py game loop for our team's game that turns one prompt into a playable visual novel (team of 6).

Skills

Languages & Backend:	Python, C++, Java, SQL, FastAPI, Flask, REST APIs, JWT auth, PostgreSQL, pytest
Machine Learning:	scikit-learn, XGBoost, pandas, linear and logistic regression, L1/L2 regularization, cross-validation
Systems & DevOps:	TCP sockets, multi-process services, fault tolerance, Docker, Git, GitHub Actions, Cloudflare R2
