

Bekzat Uraimov

Computer Science student, Bellevue College · Backend with Python · Building systems in C++
Seattle, WA · (425) 215-9068 · bkzturaimov@gmail.com · bekzat.dev · github.com/bekzat-uraimov · linkedin.com/in/bekzat-uraimov

EDUCATION

Bellevue College, Bachelor of Science in Computer Science <i>Current courses: Data Structures (C++), Python for Data Science</i>	Expected Apr 2028
Cascadia College, Associate Degree, Direct Transfer (DTA)	Completed Aug 2026

EXPERIENCE

ONER, Software Engineer May 2026 – Present · Remote
Online filmmaking course platform · FastAPI, PostgreSQL, SQLAlchemy, Alembic, Docker · [code](#)

- Built the backend for a paid course platform for Kyrgyzstan, Kazakhstan and Uzbekistan, now preparing for launch. Lesson access is checked on the server against an entitlements table in an **8-table** PostgreSQL schema, never trusted from the client.
- Made each payment grant access **exactly once**. The FreedomPay (sandbox) webhook must pass **3 checks** (signature, amount, duplicate) before access is given, and clicking "buy" twice returns the same order instead of a second charge.
- Protected course video with Kinescope DRM: short-lived playback tokens for owners only, and direct browser uploads.
- Built the admin API (**about 25 routes**) that runs the platform: course, module and lesson authoring, file uploads to Cloudflare R2 with signed URLs, user search, purchase history, refunds, and manual access control.
- Shipped every commit with pytest tests (written first) that run in GitHub Actions CI. Added JWT auth with argon2, rate limits, and JSON request logs.

Akyldoo AI, Software Engineer (part-time) Mar 2026 – Present · Seattle, WA
Student startup building ThinkCoder, an AI coding assistant · Python, LangGraph, LiteLLM, Ollama, Gemini

- Cut estimated Gemini API spend by **about 40%** before launch with LiteLLM routing: easy requests go to a local Qwen2.5-Coder 7B model on Ollama at **\$0 API cost**, harder ones go to Gemini.
- Built the Python AI orchestration layer. LangGraph runs each problem as its own stateful session, instead of one long prompt, so the assistant can take several steps and keep context.
- Kept long sessions inside the model window by managing context and tokens.

Camera Operator, Video Editor & Colorist Mar 2019 – Feb 2023 · Kyrgyzstan
Metr Production Studio (2 yrs), Antares (1 yr), Mostcreative Agency (1 yr)

- Delivered commercial videos for business clients for four years, from shoot to final color grade (DaVinci Resolve). Worked directly with clients on feedback, revisions and deadlines.

HACKATHONS & PROJECTS

Poly Predictor Kit · Polymarket Track Winner, QuackHacks, University of Oregon Nov 2025

- Built the comment collector that creates our classifier's training data by paging through the Polymarket Gamma API. Team of 6. The Chrome extension analyzes Polymarket events with Gemini, a TF-IDF + logistic regression classifier for emotional vs rational comments, and a risk check.

AI Visual Novel Creator · Best Use of AI, CodeDay Fall 2025, Seattle Nov 2025

- Wrote the Ren'Py game loop that tracks scene state and moves the story forward on each choice. Team of 6. The app turns one prompt into a playable Ren'Py game: Gemini writes the story as JSON and Stability AI draws the scenes.

focusn't · webcam focus timer (TypeScript, MediaPipe, FastAPI) 2026

- Built the in-browser distraction detection: face, gaze, blink and phone signals combine into a 0 to 100 attention score with EMA smoothing. Video never leaves the device. Team project.

SKILLS

Languages	Python, C++, Java, TypeScript, SQL
Backend	FastAPI, SQLAlchemy, Alembic, PostgreSQL, REST APIs, JWT auth, webhooks, pytest, Flask
AI / LLM	LangGraph, LiteLLM, Ollama, Gemini API, scikit-learn, MediaPipe
Tools	Docker, GitHub Actions, Git, Cloudflare R2, Vercel, Next.js
Spoken	English, Russian (native), Kyrgyz
