Bekzat Uraimov

bkzturaimov@gmail.com • Seattle, WA • bekzat.dev • github.com/bekzat-uraimov • linkedin.com/in/bekzat-uraimov

Education

Bellevue College — Bellevue, WA
Bachelor of Science in Computer Science — *Sep. '26 – Jun. '28*

Cascadia College
Associate Degree, Direct Transfer (DTA) — *Mar. '25 – Aug. '26*
GPA: 3.51
Relevant Coursework: Data Structures (C++), Python for Data Science, Programming Data Structures (Java), Intermediate Programming (Java), Calculus I-II

Work Experience

ONER • Remote — May '26 – Present
Backend Engineer & Co-founder
Backend of an online filmmaking course platform for Central Asia, preparing for launch (Python, FastAPI, PostgreSQL, Docker, pytest, GitHub Actions)
⇒ **Payments:** Stopped double charges and free access by checking every payment webhook 3 ways (signature, amount, duplicate) before a course opens, and returning the same order when someone clicks "buy" twice
⇒ **Access control:** Kept paid lessons locked by checking every request on the server (JWT login plus an ownership check), so the browser can never unlock a course by itself
⇒ **Video security:** Made paid videos hard to share by playing them through Kinescope DRM, with short-lived tokens only owners get
⇒ **Admin tools:** Let the team run the platform without touching the database by building a CRUD admin API for courses, file uploads to Cloudflare R2, users, purchases and refunds

Metr Production Studio, Antares, Mostcreative Agency • Kyrgyzstan — Mar '19 – Feb '23
Video Editor and Colorist
⇒ Edited and color graded commercial videos, from shoot to final delivery

Projects

llm-failover — Oct '26 – Present
Fault tolerant inference service (C++, Python, TCP, llama2.c)
⇒ **Recovery:** Building a service where an answer survives a crashed worker: the router logs every token, and another worker picks up the job and finishes the same answer, byte for byte
⇒ **Design choice:** Chose to save only the tokens and random number state, about 3,000x less than copying the model's KV cache (1 KB vs 3.5 MB), and to rebuild the rest by replay, trading some recovery time for much less saved state

ThinkCoder — Mar '26 – May '26
AI coding assistant, Kurultai R&D Club project (Python, LiteLLM, Ollama)
⇒ **Cost:** Cut estimated AI API spend by about 40% by sending easy requests to a free local model and only hard ones to a paid cloud model, using LiteLLM

Hackathons

Poly Predictor Kit — Nov '25
⇒ Polymarket Track Winner, QuackHacks (Univ. of Oregon), led a team of 6

AI Visual Novel Creator — Nov '25
⇒ Best Use of AI, CodeDay Fall 2025, Seattle

Skills

Languages:	Python, C++, Java, SQL
Backend:	FastAPI, Flask, REST APIs, JWT auth, pytest
Databases:	PostgreSQL
Systems:	TCP sockets, multi-process services, fault tolerance
Cloud & DevOps:	Docker, Git, GitHub Actions, Cloudflare R2
